1 Introduction

All of these commands can be modified or added to by editing "config/latex.toml" or using the voice command "configure latex".

2 Bibliography management

Once you have added the location of your .bib file (using regular slashes) to your LaTeX config file, Mathfly includes a number of commands to make bibliography management easy:

Insert my (bib resource — bibliography)	\addbibresource{your_bibliography.bib}
Add paper to bibliography	Searches google scholar for the highlighted text (paper title), appends the first resulting bibTeX citation to your bibliography file and adds the tag to the clipboard, ready to be pasted into a document.
Add book to bibliography	Same as above, but searches goodreads instead.

3 Document classes

Prefixed by "document class", these commands produce for example:

```
\documentclass{article}
```

article	article
beamer	beamer
book	book
letter	letter

5 Environments

Prefixed by "begin", these commands produce for example

```
\begin{abstract}
\end{abstract}
```

The third column represents additional arguments.

9 Templates

Templates provide a way to insert larger sections of text into your documents, for example you may have a particular set of packages which you always want to import at the head of your files, or a particular diagram which you need to draw over and over again. They are defined in the templates section of config/latex.toml And by default are executed using the "template ¡template_name¿" command. A couple are included as standard for illustrative purposes but these are designed to be edited to suit your needs. For example, the command "template wrap figure" will insert:

```
\begin{wrapfigure}{l}{0.5\textwidth}
\centering
\label{}
\includegraphics[width=0.4\textwidth]{}
\caption{}
\end{wrapfigure}
```
