1 Introduction

All of these commands can be modified or added to by editing "config/latex.toml" or using the voice command "configure latex".

2 Bibliography management

Once you have added the location of your .bib file (using regular slashes) to your LaTeX config file, Mathfly includes a number of commands to make bibliography management easy:

Insert my (bib resource — bibliography)	\addbibresource{your_bibliography.bib}
Add paper to bibliography	Searches google scholar for the highlighted text (paper title), appends the first resulting bibTeX citation to your bibliography file and adds the tag to the clipboard, ready to be pasted into a document.
Add book to bibliography	Same as above, but searches goodreads instead.
Add link to bibliography	Same as above, but constructs a citation from a url instead.
(edit — open) bibliography	Opens your .bib file in your text editor, for manual alterations and searching.

3 Document classes

```
\documentclass{article}
```

6 Commands

All of these commands are prefixed with "insert".

For example "\linebreak".

8 Mathematical symbols

In normal LaTeX mode, these must all be prefixed with "symbol". if you are dictating a large block of mathematics, then use "enable latex maths" to remove the need for prefixes before numbers and symbol, so that you can dictate more naturally.

9 Templates

Templates provide a way to insert larger sections of text into your documents, for example you may have a particular set of packages which you always want to import at the head of your files, or a particular diagram which you need to draw over and over again. They are defined in the templates section of config/latex.toml and by default are executed using the "template template_name" command. A couple are included as standard for illustrative purposes but these are designed to be edited to suit your needs. For example, the command "template wrap figure" will insert:

```
\begin{wrapfigure}{l}{0.5\textwidth}
\centering
\label{}
\includegraphics[width=0.4\textwidth]{}
\caption{}
\end{wrapfigure}
```
