

Available TeX Commands

If you're very familiar with TeX and know the TeX command for an object or operation, you can enter it in a TeX field or, if you know the TeX name for a character or symbol, from the keyboard.

> **To enter a character or symbol using its TeX name**

1. Hold down the Ctrl key.
2. Type the character or symbol name without the leading backslash (\).
3. Release the Ctrl key.

TeX is case-sensitive. If you enter the command **Sigma**, you will get Σ . If you enter the command **sigma**, you will get σ .

You can use TeX to enter these symbols and characters from the keyboard:

- Binary operations
- Binary relations
- Negated relations
- Arrows
- Miscellaneous symbols
- Delimiters
- Lowercase Greek
- Uppercase Greek
- Big operators
- Decorations
- Spaces and breaks
- Latin-1 characters
- Latin Extended characters
- General punctuation
