Dictating LATEX using Mathfly

Mike Roberts

June 26, 2019

Contents

Introduction 1

All of these commands can be modified or added to by editing "config/latex.toml" or using the voice command "configure latex".

2 Bibliography management

Once you have added the location of your .bib file (using regular slashes) to your LaTeX config file, Mathfly includes a number of commands to make bibliography management easy:

Insert my (bib resource — bibliography)

Add paper to bibliography

Add book to bibliography

Add link to bibliography

(edit — open) bibliography

\addbibresource{your_bibliography.bib}

Searches google scholar for the highlighted text (paper title), appends the first resulting bib-TeX citation to your bibliography file and adds the tag to the clipboard, ready to be pasted into a document.

Same as above, but searches

goodreads instead.

Same as above, but constructs a citation from a url instead. Opens your .bib file in your text editor, for manual alter-

ations and searching.

3 Document classes

Prefixed by "document class", these commands produce for example:

\documentclass{article}

article article
beamer beamer
book book
letter letter
proceedings proc
report report

4 Packages

Prefixed by "use package", these commands produce for example:

\usepackage{geometry}

The second column represents additional arguments.

AMS math		AMS math
bib latex	[style=authoryear]	biblatex
colour		color
geometry		geometry
hyper ref		hyperref
graphic X		graphicx
math tools		mathtools
multi col		$\operatorname{multicol}$
long table		longtable
tabular X		tabularx
X color		xcolor
wrap figure		wrapfig

5 Environments

Prefixed by "begin", these commands produce for example

\begin{abstract}
\end{abstract}

The third column represents additional arguments.

abstract	abstract	
add margin	addmargin	
center	center	
columns	columns	
description	description	
document	document	
(enumerate — numbered list)	enumerate	
equation	equation	
figure	figure	[h!]
flush left	flushleft	
flush right	flushright	
frame	frame	
(list — itemise)	itemize	
mini page	minipage	
multi (cols — columns)	multicols	{2}
multi line	multline	
quotation	quotation	
quote	quote	
table	table	[h!]
long table	longtable	$\{lll\}$
tabular	tabular	$\{llll\}$
tabular X	tabular X	$\{l X\}$
title page	titlepage	
verbatim	verbatim	
verse	verse	
wrap figure	wrapfigure	

6 Commands

All of these commands are prefixed with "insert".

6.1 With arguments

These commands finish in a set of curly brackets, ready for an argument, for example "\author $\{\}$ "

author	author
[add] bib resource	addbibresource
caption	caption

chapter	chapter
frame title	frametitle
footnote	footnote
footnote text	footnotetext[]
graphics path	graphicspath
[include] graphics	$include graphics[width=1\textwidth]$
label	label
new command	$newcommand\{\}[]$
paragraph	paragraph
paren cite	parencite
part	part
reference	ref
renew command	renewcommand
sub paragraph	subparagraph
(section — heading)	section
sub (section — heading)	subsection
sub sub (section — heading)	subsubsection
text cite	textcite
[text] bold	textbf
[text] italics	textit
[text] slanted	textsl
emphasis	emph
title	title
use theme	usetheme
grave [accent]	à
acute [accent]	á
dot [accent]	à
breve [accent]	$reve{\mathbf{a}}$
(circumflex - hat)	$\hat{\mathrm{a}}$
(umlaut - dieresis)	ä
(tilde - squiggle)	$ ilde{ m a}$
(macron — bar)	$\bar{\mathrm{a}}$

6.2 No arguments

For example " $\label{linebreak}$ ".

centering centering
column column{0.5\textwidth}
footnote mark footnotemark[]
horizontal line hline

LaTeX **L**T_EX line break linebreak item item make title maketitle new page newpage no indent noindent page break pagebreak print bibliography printbibliography

print bibliography printbibliography table of contents tableofcontents

TeX TeX

text backslash textbackslash text height textwidth textwidth vertical line vline

7 Greek letters

Prefixed by "greek". Where relevant I have provided pronunciation tips for best results.

alpha α beta β beater gamma Γ Δ delta epsilon ε zeta ζ eater eta η theta θ Θ they-tah iota kappa κ lambda λ Λ mu μ moo nu ν new ξ Ξ хi zee П pi π rho ρ sigma \sum tau Υ upsilon vphi Φ chi kie χ

sigh psi ω Ω omega

Mathematics 8

Symbols 8.1

In normal LATEX mode, these must all be prefixed with "symbol". if you are dictating a large block of mathematics, then use "enable latex maths" to remove the need for prefixes before numbers and symbols, so that you can dictate more naturally.

: 1: »	\$\$	
in-line		
super [script]		
sub [script]	x_a	
squared	x^2	
cubed	x^3	
inverse	x^{-1}	
degrees	x°	
(parens — parentheses)	(x)	
square brackets	[x]	
(curly brackets — braces)	{}	
square root	\sqrt{a}	
[generic] root	$\sqrt[n]{a}$	
integral	$\int_{0}^{\sqrt{a}}$	
double integral	Ĭſ	
triple integral	Ĵ∫ ∫∫∫	•
infinity	∞	
times	×	
divide	÷	
intersection	\cap	
union	IJ	
C dot		
summation		\sum
product		$\frac{1}{1}$
(direct sum — oh plus)		
(big direct sum — big oh plus)		Ф
		Φ
(direct product — oh times)	209)	$\begin{array}{c} \oplus & \oplus & \otimes & \otimes \\ \oplus & \otimes & \otimes & \pm \end{array}$
(big direct product — big oh times)		
plus or minus		土

8.2 Accents

Prefixed with "accent".

bar	\bar{a}
breve	\check{a}
check	ă
dot	\dot{a}
ddot	\ddot{a}
hat	â
wide hat	\hat{a}

tilde \tilde{a} wide tilde \tilde{a} vector \vec{a}

9 Templates

Templates provide a way to insert larger sections of text into your documents, for example you may have a particular set of packages which you always want to import at the head of your files, or a particular diagram which you need to draw over and over again. They are defined in the templates section of config/latex.toml and by default are executed using the "template template_name" command. A couple are included as standard for illustrative purposes but these are designed to be edited to suit your needs. For example, the command "template wrap figure" will insert:

```
\begin{wrapfigure}{1}{0.5\textwidth}
\centering
\label{}
\includegraphics[width=0.4\textwidth]{}
\caption{}
\end{wrapfigure}
```
